# Single sliding door without rail

The X-Guard single sliding door without rail is the perfect safety solution for openings that require unobstructed overhead access. Ideal for forklifts and overhead cranes, it offers a max width of 2900mm and height of 2500mm. Meets Machinery Directive 2006/42/EC.

The X-Guard single sliding door without rail is designed for industrial environments where overhead clearance is essential. Unlike traditional sliding doors, it operates without an upper rail, making it the ideal choice for areas where forklifts or overhead cranes need unrestricted access. Available in multiple widths—900mm, 1400mm, and 2900mm—and with a maximum height of 2500mm, this door provides a practical and efficient safety solution.

Its space-saving design is well-suited for warehouses, production facilities, and logistics centers where maintaining workflow efficiency is key. The smooth sliding mechanism ensures easy operation, while the door can be customized with different locking options to meet specific safety needs.

Compliant with the Machinery Directive 2006/42/EC, the X-Guard single sliding door without rail offers a secure, durable, and adaptable alternative for environments where conventional safety doors are not suitable.

Note: The maximum width may vary depending on the locking solution. Posts, handles, and panels are not included in the door package.
